I am writing to apply for the Working Student Go-to-Market position at 1KOMMA5°. Your mission to build the energy system of the future with Heartbeat AI is exactly the kind of real-world impact I want to contribute to. The idea of expanding intelligent energy optimization beyond your existing customers to anyone with solar and battery assets is a compelling challenge.

As a software engineering student with hands-on experience in full-stack development and system monitoring, I bring a structured, data-oriented approach to operational work. I have built and maintained real-time dashboards that track server health, latency, and availability metrics, consolidating data into clear, decision-ready updates for the team. This experience directly aligns with keeping performance tracking reliable and maintaining reporting cadences for launch KPIs and activation metrics.

In previous professional roles, I worked closely with product and operations teams to identify bottlenecks in customer-facing workflows and drive concrete fixes. I am comfortable breaking complex workstreams into clear tasks, flagging dependencies early, and ensuring alignment across functions. I follow through on action items end-to-end and make sure progress doesn't stop at the meeting room door.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I am enrolled in a Bachelor's program in Software Engineering and looking for a working student role with real responsibility. I've attached my CV for your review and would welcome the opportunity to discuss how I can support the GTM team during this pivotal phase.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
