I am writing to apply for the Senior Data Analyst - Strategy & Insights position at exmox GmbH. The role sits at the intersection of data, strategy, and business impact, which aligns with how I approach analytical work: building systems that turn raw data into clear, actionable decisions.

While my primary background is in software engineering, I have consistently worked on data-intensive projects that required performance monitoring, dashboarding, and automation. I built a real-time server health monitoring system using Node.js, Socket.IO, and Python that streamed live metrics to a React-based dashboard. This involved designing data pipelines, setting up role-based access, and deploying the full stack with Docker and Nginx. I am comfortable working with SQL and Python for data manipulation and have used tools like Prometheus and Grafana for observability.

One area that particularly interests me is the emphasis on problem framing and converting ambiguous business questions into structured investigations. In my work developing an AI-powered financial application, I regularly translated vague stakeholder needs into scoped technical plans, built API endpoints, integrated third-party services like AWS SES and OpenAI, and ensured data integrity across the system. I approach unclear problems by breaking them into testable hypotheses and building decision-ready outputs.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my analytical and technical skills can contribute to exmox’s growth. Thank you for your time and consideration.

Sincerely,

Md Shahanur Islam Shagor
