I am writing to apply for the Senior IT Projekt Manager position at K-tronik GmbH. The role's focus on coordinating global IT workplace redesign projects, balancing diverse stakeholder requirements, and ensuring security compliance aligns with my experience in managing complex technical initiatives from planning through delivery.

My professional background includes leading full-stack development projects where I was responsible for structuring requirements, prioritizing features, and coordinating between business stakeholders, security teams, and technical contributors. I have practical experience managing agile project setups, including workshop facilitation, backlog management, and iteration planning to keep cross-functional teams aligned and delivering consistently.

One area that particularly interests me is the challenge of translating very different requirements from various user groups into unified technical concepts. In previous projects, I regularly acted as the bridge between business needs and technical implementation, ensuring that security and compliance requirements were integrated into every stage of development. I am comfortable preparing decision templates and management briefings that make complex technical topics accessible to C-level stakeholders.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my project management experience can contribute to K-tronik's team.

Best regards, Md Shahanur Islam Shagor

Sincerely,

Md Shahanur Islam Shagor
