I am writing to express my interest in the AP Operations Analyst (Australian SMSF) position at D2B. While my professional background is in software engineering, I have developed strong skills in data reconciliation, transaction processing, and structured workflow management through building complex financial systems and real-time data platforms.

Through hands-on project development, I have designed and built full-stack applications that handle high-volume data processing, secure transactions, and financial record management. For example, I developed an AI-powered financial application that processes user data, integrates with Google Sheets, generates PDF term sheets, and manages automated email delivery via AWS SES. This required careful attention to data integrity, reconciliation of inputs and outputs, and adherence to structured operational workflows.

In my professional experience as a Web Developer, I implemented role-based access control, authentication systems, and payment gateway integrations. These systems demanded precision, confidentiality, and the ability to manage multiple concurrent tasks while maintaining accuracy. I am comfortable working within SOP-driven environments and following structured processes to ensure consistent and reliable outcomes.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. Thank you for considering my application for this role.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
