I am writing to apply for the Learning And Development Specialist position at DTI (Diversified Technology Inc.). My background in software engineering has given me extensive experience in structuring technical knowledge, mentoring peers, and building systems that support continuous learning.

Throughout my professional experience as a Web Developer at Explo-IT and DataSoft LTD., I have been responsible for more than just writing code. I regularly conducted code reviews, wrote clear technical documentation, and facilitated knowledge-sharing sessions with team members. These responsibilities required me to break down complex technical concepts into understandable components, assess skill levels, and provide constructive feedback.

One area that particularly interests me is the design of learning pathways and competency frameworks. In my previous roles, I helped onboard new developers by creating structured learning materials and establishing best practices for our tech stack, which included Laravel, Next.js, and various database systems. I understand how to identify skill gaps and design progressive learning paths that build competence incrementally.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my experience in technical training and development could contribute to DTI’s learning initiatives.

Thank you for your time and consideration.

Sincerely,

Md Shahanur Islam Shagor
