I am writing to apply for the Business Analyst (m/w/d) Cyber Security & Compliance position at EWERK GROUP. The opportunity to work on real security challenges in regulated industries like energy, finance, and the public sector aligns directly with my technical background and research focus.

Through my academic research in secure UAV systems, I have developed a practical understanding of cybersecurity principles that apply directly to the responsibilities of this role. My work has involved designing secure communication protocols using encryption (AES), implementing data integrity mechanisms to prevent malicious command injection, and building fault-tolerant system architectures that remain resilient under adversarial conditions. These experiences have given me a strong foundation in risk analysis, security strategy, and the structured thinking required to support ISMS development according to frameworks like ISO 27001.

One area that particularly interests me is translating complex security requirements into clear, actionable documentation and processes. In my research, I have documented system architectures, threat models, and mitigation strategies in a way that is precise enough for technical implementation while remaining accessible to non-specialist stakeholders. This skill maps directly to creating guidelines, policies, and operational procedures that are practically applicable in a consulting environment.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background in cybersecurity and structured analysis can contribute to EWERK GROUP’s consulting work.

Best regards, Md Shahanur Islam Shagor

Sincerely,

Md Shahanur Islam Shagor
