I am writing to apply for the Senior DevOps/ Cloud Engineer position at Accurids GmbH. Your work in building the data backbone for life-science innovation, standardizing critical enterprise data in compliance with ISO IDMP, is an area where I see strong alignment with my technical background.

My experience spans cloud infrastructure, containerization, CI/CD, and observability. I have worked with AWS, Docker, Kubernetes, Prometheus, and Grafana in production contexts. I am comfortable managing Linux servers, configuring Nginx, and setting up CI/CD pipelines. I also have experience with PostgreSQL and have used Infrastructure as Code principles in my deployments.

One area that particularly interests me is operating and scaling AWS infrastructure, including multi-account environments, EKS, and RDS. In my previous work, I deployed full-stack applications on AWS EC2, configured Docker containers, and used Nginx for reverse proxying and load balancing. I built a real-time server health monitoring dashboard using Node.js, Socket.IO, and Docker, which involved streaming live metrics and managing containerized services. This project gave me practical experience with the kind of observability and platform automation that Accurids relies on.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background can contribute to Accurids' infrastructure and platform goals.

Thank you for your time and consideration.

Sincerely,

Md Shahanur Islam Shagor
