I am writing to apply for the Senior Full Stack Engineer - Sidekick role at SumUp. The work the Sidekick team does building a progressive web app that directly empowers field sales agents to create offers, sign up merchants, and track commissions in real time is exactly the kind of product I want to contribute to. I have been building full-stack web applications professionally for over four years, and I am drawn to the ownership and stakeholder engagement this role offers.

My technical foundation is built on React, TypeScript, and Next.js, which I have used to ship scalable, maintainable applications in production. I also have hands-on experience building and consuming RESTful APIs within microservice architectures, and I am comfortable deploying and managing applications in cloud-native environments using Docker and Kubernetes. These are the core technologies the Sidekick team relies on, and I have applied them across multiple real-world projects.

In my professional experience as a Web Developer at Explo-IT, I owned features end-to-end from scoping through to production. I built and integrated RESTful APIs, implemented authentication and role-based access control, delivered real-time features using WebSockets, and deployed applications on Linux servers with Nginx and Docker. I also worked closely with stakeholders to understand requirements and propose practical solutions, which aligns directly with how the Sidekick team collaborates with sales stakeholders.

One project that reflects the kind of work this role requires is the Smart Finance platform, a full-stack personal finance management application I built with Next.js, TypeScript, and Tailwind CSS. It features secure server-side authentication, role-based admin controls, real-time updates via Server-Sent Events, and Docker-based deployment. The architecture was designed for scalability and maintainability, and I took full ownership of the feature delivery from design to deployment.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments. I have attached my CV for your review and would welcome the opportunity to discuss how I can contribute to the Sidekick team at SumUp.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
