I am writing to apply for the Senior Analytics Engineer, Merchant position at Wolt. Wolt's work in building a complex delivery platform that handles real-time geolocational and temporal data across hundreds of cities is genuinely interesting to me, and I would welcome the opportunity to contribute to the Merchant Analytics Engineering team.

My technical experience centers on building and maintaining data-driven systems. I have worked with SQL, MySQL, and PostgreSQL to design schemas, write optimized queries, and manage data pipelines. I have also deployed and monitored applications using Docker, Nginx, and cloud platforms like AWS and Google Cloud, which has given me practical experience with the infrastructure that supports analytics workflows.

A relevant example from my work is the Real-Time Server Health Monitoring project. In that system, I designed a full-stack dashboard that tracked the availability and latency of multiple target URLs simultaneously. The backend, built with Node.js and Express, used Socket.IO to stream live metrics to the frontend. This required building a data pipeline that collected, processed, and visualized system health data in real time, which aligns closely with the data integration and dashboard responsibilities described in this role.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and welcome the opportunity to discuss how my background can support Wolt's analytics engineering goals.

Thank you for your time and consideration.

Sincerely,

Md Shahanur Islam Shagor
