I am writing to apply for the Transaction Manager position at FASE. The opportunity to work at Europe's leading impact finance advisor, helping social and environmental startups scale their impact through better access to capital, is exactly the kind of mission-driven work I want to be part of.

My motivation for working in impact finance comes from a deep interest in building systems that create measurable positive change. Through my engineering background, I have seen how technology and automation can amplify the reach of organizations working on social and environmental challenges. I want to apply that same thinking to help impact startups grow and attract the right funding partners.

One area where I can contribute directly is in the selection and implementation of automation tools and artificial intelligence across the pipeline and transaction process. I have hands-on experience integrating AI assistants, automating document workflows, and building systems that reduce manual effort. For example, I developed an AI-powered financial application that automates PDF term sheet generation, data extraction from spreadsheets, and real-time communication, all of which are directly relevant to streamlining transaction management.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my skills can support FASE's mission.

Thank you for your time and consideration.

Sincerely,

Md Shahanur Islam Shagor
