I am writing to apply for the Software Engineer / AI Systems role at Strictly Boring GmbH. Your approach of building production-grade AI and automation systems that actually run during Black Week, rather than delivering demos, is exactly the kind of engineering environment I want to work in.

My work combines full-stack development with practical AI integration. I have built and deployed multiple AI-powered applications from scratch, including a financial assistant that uses OpenAI for conversational support and AWS Transcribe for voice processing, and an AI-driven real estate platform with role-based access, subscription plans, and Stripe payment integration. These projects required me to handle architecture, LLM integration, cost control, and deployment independently.

I have deployed production applications on AWS and Google Cloud with Docker, Nginx, and CI/CD pipelines. I am comfortable with monitoring, secrets management, and keeping systems reliable under load. My experience building real-time features with Socket.IO and managing databases like MySQL and PostgreSQL means I can handle the data flow and orchestration challenges your customers face.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I am looking for a role where I can own customer projects from problem understanding to go-live, and help shape the technical foundation of a growing team. I have attached my CV for your review and would welcome the opportunity to discuss how I can contribute to Strictly Boring.

Best regards, Md Shahanur Islam Shagor

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
