I am writing to apply for the CRM IT Projekt Manager position. Your client's focus on CRM/CX software, marketing automation, and machine learning aligns with my background in software engineering and project delivery.

My technical foundation in computer science and software engineering provides the analytical thinking and structured approach needed for managing CRM-related IT projects. I have experience leading full-stack development projects from concept to deployment, which has given me practical insight into software lifecycle management, requirement analysis, and cross-functional coordination.

In my professional experience, I delivered a multi-vendor e-commerce platform that required coordinating between customers, sellers, delivery agents, and logistics teams. This project involved managing technical requirements, implementing role-based access control, integrating real-time communication, and ensuring smooth deployment. The experience taught me how to balance technical complexity with business needs while keeping stakeholders aligned throughout the project.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my project management experience and technical background can contribute to your client's CRM software initiatives.

Sincerely,

Md Shahanur Islam Shagor
