I am writing to apply for the (Senior) Software Engineer Java position at Bridgency HR Management GbR. The opportunity to contribute to a long-term digitalization program in the public sector is something I find genuinely interesting, and I appreciate the emphasis on modernizing enterprise systems with practical engineering.

My professional experience has been centered on building and maintaining server-side applications and web-based systems. I have worked with PHP (Laravel), Node.js, and MySQL to develop scalable backend services, RESTful APIs, and secure authentication flows. I am comfortable working with distributed application architectures and have deployed systems on Linux servers using Docker, Nginx, and CI/CD pipelines. While my primary stack has not been Java, the core principles of server-side development, API design, and enterprise application architecture transfer directly.

In previous work, I have been responsible for implementing role-based access control, integrating third-party services, optimizing database queries, and ensuring application reliability through testing and code reviews. I have also built responsive, SEO-friendly web interfaces using HTML, CSS, JavaScript, and modern frameworks. These responsibilities align closely with the tasks described for this role, including web component development, system integration, and quality assurance.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. Thank you for considering my application.

Sincerely,

Md Shahanur Islam Shagor
