I am writing to apply for the (Senior-) Underwriter:in position at Gunnar Kˆ…hne Executive Search GmbH, representing a leading industrial insurer. While my professional background is in software engineering, I bring a strong foundation in analytical thinking, data-driven decision-making, and structured problem-solving that are directly transferable to the underwriting domain.

In my previous work as a Web Developer, I was responsible for building and maintaining complex systems that required precise attention to detail, rigorous testing, and clear documentation. I regularly analyzed data to optimize performance, identify patterns, and make informed decisions. These skills are essential for evaluating risks, developing renewal strategies, and managing a trade credit portfolio.

One area that particularly interests me is the coordination of international programs and the development of contract wordings. My experience working on cross-functional projects with remote teams has given me a practical understanding of stakeholder management and clear communication. I am comfortable working with diverse groups to align on objectives and deliver results.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I am confident that my analytical mindset, attention to detail, and ability to manage complex workflows would allow me to contribute effectively to your client's underwriting team. I have attached my CV for your review and welcome the opportunity to discuss how my background aligns with this role.

Sincerely,

Md Shahanur Islam Shagor
