I am writing to apply for the Senior Analyst / Associate M&A position at Gunnar Kˆ…hne Executive Search GmbH. While my professional background is in software engineering and system architecture, I bring strong analytical and numerical skills developed through building complex, data-intensive applications.

In my professional experience, I designed and developed an AI-powered financial application that involved creating RESTful APIs, integrating third-party services, and implementing automated data processing and report generation workflows. This required precise attention to data integrity, financial logic, and system reliability skills directly transferable to financial modeling and analysis.

One area that particularly interests me is the intersection of technology and finance. Through my work on financial platforms, I have developed a practical understanding of how data flows through financial systems, how to structure and analyze large datasets, and how to present complex information clearly to stakeholders. These experiences have strengthened my ability to work with numerical data and produce high-quality documentation.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I am confident that my analytical mindset, attention to detail, and ability to manage complex workflows would allow me to contribute meaningfully to your team. I have attached my CV for your review and welcome the opportunity to discuss how my background aligns with this role.

Sincerely,

Md Shahanur Islam Shagor
